

Summarized Insights from the Usability Evaluations

All images referenced in the text are located at the bottom of the document.

Second Customer Check-in

The following insights were obtained during our second customer check-in with Julius Brown, the Executive Director of OSI-CAN Saskatchewan, and Brooklyn Coulson, the Digital Impact Officer of the Saskatchewan Community Foundation. They were gained by observing how they utilized our prototype and by asking them about their opinions on its functions and aesthetics

- Mr. Brown's first impression was that the prototype was red, that it was simple, and that it was easy to navigate.
- The main colour on the site was red. He mentioned that this could be triggering for the people who may use the site's resources, as it often symbolizes being on alert. He then suggested the theme be changed to light blue. This has now been changed, and both the previous design and current design are shown at the bottom of this document.
- Mr. Brown liked the simplicity of the design and stated that this simplicity would aid the users in locating what they are looking for.
- He also liked the simplicity and design of the prototype's footer, and that it could be found on every page. He stated that it prominently recognizes the supporters and lets the users know who is supporting the program.
- Mr. Brown was also able to quickly locate the different pages.
- He liked the folder design on the individual programs and event pages. He said that all the information is on the user's "fingertips".
- He utilized the main menu more than the navigation buttons located on the home page.
- It was stated that the prototype did not have a prominent display of an emergency contact. We have now added this.
- It was also mentioned that the donate button was obscured and that it should be made more visible.
- Ms. Coulson stated that our design was "professional".

Usability Questionnaire Bazaar/Scramble

The following insights were obtained during the usability questionnaire bazaar/scramble. They were gained by observing how our classmates utilized our prototype and by asking them about their opinions on its functions and aesthetics

- A user stated that the colours were good and that everything looked fine.
- It was mentioned that we do not have descriptions for the videos on the home page and that those should be added.
- A user said that it would be useful to also make the arrows on the main Events page clickable and that they should link to their respective individual program page.

- Our classmate stated that they would like a button on the individual program pages that takes you back to the main program page.
- They stated that there are too many questions on the home page and that it should be limited to only the most popular 5-10 questions.
- The user should get some confirmation that they successfully submitted their volunteer form.
- The classmate stated that we should make a contact page, as people may not notice the social media links that are currently located on the footer.
- The user utilized the main menu a lot more than the navigation buttons on the home page. One user did not use the home page navigation buttons at all.
- The user mentioned that the titles on the about us page look like buttons. At least two different users tried to click them.
- The users found the testimonial videos. One user stated that navigating between the videos is unclear as “the arrows did not point in the direction the testimonials move”
- Users successfully found the donation page.
- One user said that the donation page was easy to find and navigate.
- Another user stated that the donate button is too easily ignored.
- We should add a method for e-transactions on the donate page.
- The users do look through the different folder pages on the individual program pages.
- One of the users stated that when they “looked for specific pages it was not hard to find them”
- A classmate mentioned that we need a way to access the OSI-CAN featured podcasts and blogs. That is currently something that our prototype lacks.
- The buttons for the Q&A are too small. This has now been fixed.

Visuals

The black borders are not included in the design. They are there to separate the images from the page.

Image 1: Previous Design – showcases original colours and lack of emergency contacts

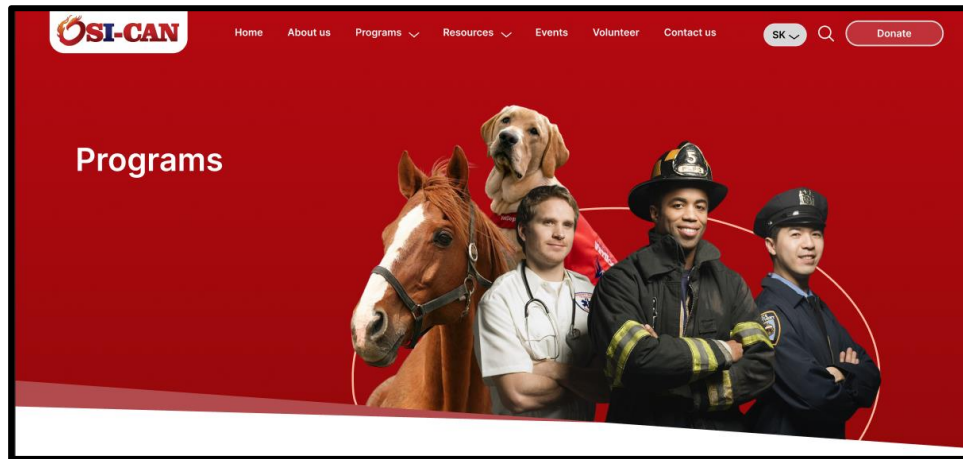

Image 2: Current Design – Updated colour palette and emergency contacts
