

Summarized Customer Notes from the Third Customer Check-In

The following insights were obtained during our third customer check-in with Julius Brown, the Executive Director of OSI-CAN Saskatchewan; Brooklyn Coulson, the Digital Impact Officer of the Saskatchewan Community Foundation; and Dr. Tim Maciag, the professor of our ENSE 271 class. The notes include their opinions and feedback about our current work-in-progress WordPress design.

- Ms. Coulson stated that we did a fantastic job recreating our Figma design in the WordPress website builder.
- Mr. Brown stated that the crisis line on the top of the header should be made more “prominent” and that it should be the “first thing [users] see” when entering the site.
- He likes the design and layout of the site’s Home page.
- F&Q on the Home page should be changed to FAQ.
- Mr. Brown liked the dropdowns for the answers of the FAQ.
- Mr. Brown could not find the location of the search function located on the site header without external help. Consequently, we could make it more noticeable.
- Ms. Coulson mentioned that the site menu is difficult to see on certain pages. This is due to the colour of the text not contrasting enough with the colour of the background image. Examples of this issue include the individual program page and individual event page.
- She also mentioned that the header images on some of the pages did not fill the full width of the screen and that they should be made to properly fit the pages.
- Mr. Maciag mentioned that the menu text may be hard to read due to the text size being too small. He also mentioned that this could potentially be fixed with a WordPress plug-in that lets users select their own text size.
- Ms. Coulson liked the separate search bar for the resources page. She wanted to know what plug-in was used for it.
- On the resources page, Mr. Maciag said the vertical menu that is currently located on the right-hand side of the page should potentially be moved to the left.
- Another thing that was brought up was that it is very important for the target demographic to be able to see themselves represented on the site. Therefore, the description of the target demographic should be added to the Home page.
- It was mentioned that the text on the About Us page is too small. We were also told we could think about using accordion or dropdown styled menus for the navigation on the About Us page.
- They liked the colours of the current design.
- Mr. Maciag stated that our work was “awesome” and “very well done”.
